

Mohamed Reda Keshk

Backend Developer

 m7mdreda74@gmail.com  +201099670724  Mansoura, Egypt  Mohamed Keshk  m7mdreda74  Completed

PROFESSIONAL SUMMARY

I am a motivated backend developer with hands-on experience in creating web applications and APIs using Laravel and PHP. I have successfully completed several training programs, enhancing my skills in database management, RESTful services, and teamwork. Eager to contribute to innovative backend systems, I continuously seek opportunities to improve my technical expertise and apply best practices in software development.

EDUCATION

Bachelor of Computer and Information Sciences, Information Systems Department, 2020 – 2024
Mansoura University

TECHNICAL SKILLS

- Programming Languages PHP, C#, JavaScript, Python	- Database Systems MySQL, SQL	- Programming Paradigms OOP	- Tools Composer, Git, GitHub, RESTful APIs
---	---	---------------------------------------	--

Web Frameworks
Laravel, ASP

SOFT SKILLS

Communication Active Listener, Persuasive	Time Management Prioritization, Deadline Adherence	Teamwork Collaborative, Supportive	Critical Thinking Analytical, Objective, Strategic
---	---	--	---

EXPERIENCE

Backend Developer - Serv5 PHP & Laravel, MySQL, SaaS	Apr 2025 – Present Mansoura, Egypt
Fullstack Training - ITI Mansoura  HTML, CSS, JS, MySQL, PHP, and Laravel.	Aug 2024 – Sep 2024
Backend Training - NTI Mansoura  PHP, SQL, and Laravel	May 2024 – Aug 2024
Training Course of Back End Development - CCIC - Mansoura University  Dynamic Language (PHP), MySQL, and Laravel	Jul 2023 – Oct 2023
Back-End member - CIS Team MU - Mansoura University  Student activity	Nov 2022 – Dec 2023

PROJECTS

Serv5 co. website Designed & Developed Scalable RESTful APIs (v1): Built structured endpoints for Authentication (via Laravel Sanctum), Services, Products, and Blog management with secure data transmission. Built a Feature-Rich Dashboard via Filament PHP: Designed and implemented an administrative panel featuring a custom Page Builder, allowing admins to create dynamic web pages on the fly. Engineered a Dynamic Services & Pricing Plan Engine: Designed database schemas and controllers to manage customizable services, linking them dynamically to complex pricing templates. Developed an Application Tracking System (ATS) & Careers Portal: Built backend logic to post job openings and handle structured user applications, including resume uploads and processing. Implemented a Quotation & Consultation Engine: Created API handlers to process incoming service requests, custom quotes, and consultations directly from frontend forms. Enforced Role-Based Access Control (RBAC): Secured sensitive dashboard operations and APIs using Spatie's permission/role framework, limiting actions based on admin hierarchy. Optimized API Performance & Cache Invalidation: Designed automated cache-flushing mechanisms triggered on database model updates, significantly improving response times.	May 2026 – Jun 2026
---	---------------------

MynewResturant is a high-performance **Multi-Tenant SaaS** platform engineered with **Laravel**, designed to provide a comprehensive digital infrastructure for restaurant chains. The system utilizes a **Multi-Database strategy**, ensuring total data isolation and top-tier security by providing each tenant with a dedicated database environment. It bridges the gap between platform administration and day-to-day restaurant operations through a sophisticated hierarchical access model.

Key Features

- **Multi-Database Tenancy:** Implemented a robust "Database-per-Tenant" architecture for 100% data isolation, enhancing security and system scalability.
- **Automated Tenant Onboarding:** Seamless provisioning system that automatically generates dedicated databases, runs migrations, and configures subdomains for new subscribers.
- **Tri-Level Hierarchy (RBAC):** Advanced permission logic for **Super Admins** (Platform control), **Tenant Admins** (Business owners), and **Staff** (Operational roles).
- **Dynamic Resource Routing:** Specialized middleware to handle tenant identification and seamless connection switching across multiple database instances.
- **Centralized SaaS Management:** A dedicated Super Admin portal to monitor tenant health, manage subscription lifecycles, and push global updates.
- **Full Operational Suite:** Comprehensive modules for real-time order processing, digital menu management, and table reservation systems.
- **Inventory & Stock Tracking:** An integrated system for managing raw materials and ingredient levels with automated alerts for low-stock scenarios.

- Platform aims to help people with Parkinson's disease.
- The platform consists of a mobile application, ML Disease diagnosis models, and reading measurements from Firebase.

Store , PHP & Laravel MVC

- Created an e-commerce platform with Laravel, including product and category management
- Comprehensive user authentication. I designed a responsive user interface and an admin panel to manage products and orders easily.

Laragigs , PHP & Laravel MVC

- A website for small jobs.
- User authentication, CRUD operations for posts, and simple comment functionality.

Blog , PHP & Laravel MVC

- A website for publishing articles and commenting on others' articles.
- User authentication, CRUD operations for posts, and simple comment functionality.

Mobile-Shopee , PHP, HTML, CSS, JavaScript

- E-commerce website for a mobile shop.
- CRUD operations for mobiles and categories
